

About StepOver GmbH:

- StepOver GmbH is a company founded in 2001 with head offices in Stuttgart and support branches in Madrid, Minsk and Frankfurt.

Our strenghts:

- Hardware and software components are developed and produced in-house, ensuring perfect harmonisation.
- Hardware and software “Made in Germany“!
- Research and development in cooperation with the Otto-von-Guericke-University Magdeburg and the Fraunhofer Institut.
- StepOver GmbH is the leading European manufacturer of hardware and software for handwritten electronic signatures.

Our experience:

- Experience with well known clients.
- Highest quality and functionality.
- Great Value for Money!

The StepOver GmbH team

The StepOver GmbH based in Stuttgart was founded in 2001 and is privately owned by both managing partners and financially sound private investors, who render StepOver GmbH financially independent of banks, even during the realisation of large orders.

The main focus of StepOver GmbH lies in optimising business processes and the necessary modules. StepOver GmbH is developer, manufacturer and distributor of the necessary hardware, as well as the software modules required for integration. One important approach for optimising business processes is the removal of paper-based signatures. A continuous, fully electronic workflow is made possible by eliminating format mismatches caused by paper-based signatures. With this purpose in mind StepOver GmbH designs and manufactures the necessary biometric devices, the signature pads.

StepOver offers an array of application packages and programming interfaces providing all necessary additional functions for the realisation of a legally sound system for electronically acquired handwritten signatures.

Das Team der StepOver GmbH

The 6 members of the StepOver GmbH development team develop the entire programming of software components and firmware required by the hardware. Two of our hardware developers exclusively develop the signature pad chip sets and the resulting quality assurance.

Mass production of electronic equipment and housing is carried out exclusively by long standing ISO certified partner companies in Germany.

In addition to this all deliverable hardware products fall under the scrutiny of an extensive final inspection at the StepOver GmbH base.

Market position

StepOver GmbH is Europe's leading manufacturer of hardware and software for the acquisition of handwritten electronic signatures. More than 80.000 StepOver software applications have already been sold in Germany.

StepOver's key clientele consists of renowned German insurance and industrial companies that have furnished their field staff, service technicians and entrance gates with app. 80.000 Signature pads.

StepOver GmbH products also find increasing use in public agencies (identity cards) and banks.

Product-Portfolio

Signatur Pads:

plusPad

The StepOver plusPad with LCD screen combines pioneering security functionalities (time stamp, hardware-ID, etc.) with the highest comfort offered by LCD signature pads. The LCD display provides a writing sensation similar to that on a sheet of paper. User interaction by touch-sensitive symbols or display texts can be easily implemented.

The signature data acquired by the pad is time stamped in GMT with an integrated, tamper-proof real time clock. Each plusPad has its own hardware-ID (serial number), which allows every signature to be mapped to a specific signature pad.

naturaSign Pad

The naturaSign Pad with LCD Screen and USB Port is the most advanced portable service model, developed and manufactured in Germany by StepOver. With a height of just 1 cm (0.39 inch), the naturaSign Pad is currently the thinnest LCD sign pad on the global market.

Software – excerpt:

eSignature Office (Tablet-PC-Edition)

Software for the electronic signature of PDF / TIFF documents and for filling in PFD form fields, incl. the StepOver TIFF & PDF converter. Available also for Tablet-PCs

StepOver PDF-Plug-In

The StepOver PDF Plugin enables the user to sign Adobe Acrobat and Adobe Reader documents.

StepOver TIFF & PDF Converter

Windows printer driver for conversion of electronic documents to tamper-proof formats (TIFF / Multi-TIFF / PDF) from any printable Windows format.

StepOver API Signatur

Programming interface for signature integration into TIFF and PDF documents incl. encryption and authenticity guard into internal application.

StepOver Verification Engine

Software for real-time signature comparison with previously collected reference signatures.
